Shourov Joarder

joardershourov60@gmail.com | shourovj | shourovj | shourovj | shourovj

Education

Bangladesh University of Engineering & Technology (BUET) Bangladesh
B.Sc. in Electrical and Electronic Engineering *Feb. 2020 – March. 2025*
Major : Communication and Signal Processing (*CSP*)
CGPA : **3.88/4.00** (**2nd** in *CSP major*)

Relevant Courses: Artificial Intelligence and Machine Learning | Digital Image Processing I | Digital Signal Processing | Control System I | Random Signals and Processes | Microprocessors and Embedded System | Digital Electronics | Electronic Circuits I, II | Probability and Statistics

Research Interests

Computer Vision | Multimodal LLM (VLMs) | Medical Image Processing | Autonomous Vehicle

Publications

1. **Shourov Joader**, A. Nayem, S. Hasan, H. Hasan, and S. A. Fattah, *"Multilingual Voice-Controlled Smart Wheelchair with Advanced Features," Accepted at ECCE, 2025*
   Tldr: Developed a full scale wheel chair integrated with voice-control, collision detection and avoidance and advanced features.

2. A. Dhar, D. Sikder, A. Shovon, and **Shourov Joarder**, *"Skin Cancer Semantic Segmentation," Accepted at ECCE, 2025*
   Tldr: Stacked Hourglass model converts cartesian image to polar image which is then fed to a TransUnet model for semantic segmentation.

Research Experiences

Undergraduate Thesis Student, EEE, BUET *March 2024 - March 2025*
Supervisor : Dr. Kamrul Hasan

Unsupervised End-to-End Sequential Deep Learning Method for Ultrasound Strain Elastography
A medical imaging technique that determines the tissue region strain that helps detect/classify the tumor/lesion region from the surrounding tissue by their strain.

- Implemented ReUSENet paper in Pytorch
- Developed a new model consisting of a new **Tripple Encoder**, a novel **TriCrossAttenion**, a **Sequential Decoder**, and a novel loss for Displacement Field and Strain Estimation in Strain Elastography from RF sequence and implemented this in Pytorch
- My proposed model beats SOTA unsupervised ReUSENet (implemented) in terms of SNR, CNR, NRMSE metrics, and also improves the strain image quality

Work Experience

Machine Learning Engineer, ACI Ltd. *April 2025 - Present*
Ongoing Projects

- Working on building a robust OCR using deep learning techniques to extract medicine details and bank cheque details from an image of a handwritten prescription and cheques.
- Developing a generalized framework by integrating traditional OCR engines with LLM for Bangla and English text extraction, VQA from any modality of documents, from printed pdf, images, to handwritten documents.

Competitions

- 1st Runner-Up of Undergraduate Project Idea Contest at 25th ICCIT 2022, Bangladesh. [Certificate]
- 57th in the public leaderboard of DL Sprint - BUET CSE Fest 2024, Bengali AI Math Olympiad an LLM based competition.
- **Best Notebook Award** at the DL Sprint - BUET CSE Fest 2022, Bengali ASR Competition.

Honors and Awards

- University Merit Scholarship (3 times) *2020, 2021, 2023*
- University Dean's List Scholarship (2 times) *2021, 2022*
- University Stipend (2 times) *2021, 2022*

Selected Projects

Autonomous Inventory Robot Github
Developed an autonomous robotic system capable of executing real-time voice commands to identify, retrieve, and transport specified objects. The system integrates **Google Speech API** based speech recognition, **YOLOv5-s** for real-time object detection with robotic arm manipulation for precise object grasping with a **Rasphberry-pi** as the processor. Following successful acquisition, the object is returned to a predefined base location using a Line Following Robot (**LFR**) navigation system.

Deep-Learning-based-Breast-Cancer-Classification-Using-VGGIN Github
Trained the **VGGIN** model—a custom deep learning architecture that integrates **VGG-19** with the **Inception** module, on the BreakHis histopathology dataset. Achieved a test accuracy of 99.628%, demonstrating the model's effectiveness in classifying breast cancer subtypes from histopathological images.

Voice Controlled Wheelchair for Disabled Patients Github
Developed a full scale voice-controlled wheelchair for physically impaired people. **GMM**-based trained **VoiceRecognitionV3** module takes voice commands from the patients in any language and in any accent and moves accordingly. In addition, the wheelchair collision avoidance and emergency help feature.[Video].

Machine Learning Based Electrical-Fault-Classification-with-GAF-image Github
ML algorithms like **Decision Tree Classifier**, **Random Forest** and **CNN** based deep learning method with **GAF** transformed images were used to classify 5 different types of electrical fault *(eg. LL, LLL, LG, LLG and No-fault)* from the BUS voltage and current data.

Extracting Audio from Muted Video Github
The main goal of this project was to extract the audio signal from a muted video using signal processing methods in MATLAB. The local and global pixel motions were captured using **Complex Steerable Pyramid** decomposition. This was originally a project by Abe Davis, MIT [Visual Microphone].

Car Theft Detection and Prevention with Automatic GPS Tracking Github
This is an IoT based project. **GSM** and **GPS** technology was used to track and send the car location, and **ESP32-CAM** module was used to capture the photo of the thief and shut the car down.[Video Presentation].

Single Phase Transformer Simulator Github
Developed a simulator which simulates a single phase transformer. The simulator was designed by **MATLAB GUI**and the back-end code was also done in MATLAB.

Skills

Programming	Python, MATLAB, C/C++, Verilog, Assembly, Processing3, Linux, LaTeX, Git
Framework	PyTorch, TensorFlow, Jupyter, OpenCV
Simulations and Tools	Raspberry Pi, Arduino, Proteus, Pspice, Quartus, Keil
Frontend Backend	FastAPI, Flusk, Gradio, Android Studio, Kotlin (Basic).

Extra Curriculum

President, BUET Photographic Society *Aug. 2024 - March. 2025*

President, BADHAN-(Ahsanullah Hall Unit, BUET) *Aug. 2024 - March. 2025*
